

Develop an Interactive Task List Web Page course

Test a web page

Here are important areas to test that should be a part of any test plan.

Test the visual aspects

Here's a checklist of questions you should think about when testing the visual aspects of your web page.

Colors

- Do the colors adhere to the requirements and wireframe diagram?
- Did you include the hexadecimal color values for your styles in the CSS file?

Element layout

- Do any elements overlap each other?
- Are elements spaced appropriately?
- Does anything move off the screen when you add task items?
- Do the scrollbars work with the layout?
- Have you referred to your CSS file to ensure you're spacing items according to the requirements and wireframe diagram?

User information

- Do messages appear when they're supposed to?
- Are messages clear and readable?
- Does your user interface have prompts that tell a user what to do?
- Have you used clear labels for buttons?

Test the functionality

Here's a checklist of questions you should think about when testing the functionality of your web page.

User element behavior

- Do buttons work the way they're supposed to?
- Do keyboard interactions work as expected?
- Does the checkbox visually change the appearance of a task?

Visual element behavior

- Do scrollbars display when they're supposed to?
- Does your JavaScript lay out elements as you expect?
- Do user messages appear when they're supposed to?
